Medium Expansion Foam Branchpipe
M2 - M4

Description
M2 and M4 branchpipes are designed for firefighting to apply a safety blanket of medium expanded foam. Medium expansion foams provide increased safety when applied during an intervention especially where flammable liquids are involved. Risks of re-ignition of flammable liquids are considerably reduced due to the height of foam blanket created.

The advantage of medium expansion foam compared to low expansion foam is that up to 5 times more foam can be produced with the same amount of water.

This reduces clean-up costs. It is also possible to fill a small room and to blanket flammable liquids as a preventive measure in the event of a nearby fire.

Application
M2 and M4 medium expansion foam branchpipes performs well with fluoroprotein, multipurpose, AFFF, FFFP, and ARC foam concentrates.

Typical applications for M2 and M4 branchpipes include the oil and chemical industries, general industry, airports, and fire brigades.

Features
M2 and M4 medium expansion foam branchpipes have the following features:
- High protection against corrosion
- Low weight equipment
- Available in 200 Lpm and 400 Lpm flows
- Pressure gauge to show water pressure at branchpipe
- Perform with all foams including AFFF-ARC

Construction
Construction in stainless steel, rubber, and plastic ensures optimum protection against corrosion. The nozzle, coupling, and shut-off valve are produced from light metal for easy handling.

M2 and M4 medium expansion branchpipes produce a high quality foam which meets the requirements of the German Standard (DIN).

Recommended Foam Concentrate
M2 and M4 medium expansion branchpipes perform with all types of foam concentrates, including alcohol resistant concentrates.

The foam concentrate used with M2 and M4 branchpipes should be of a suitable type for the risk to be protected, for example, ARC foam concentrates for water miscible liquid fires.
